FAÇADES THAT REDEFINE CONVENTION.

The New Zealand International Convention Centre needed more than a façade – it demanded an envelope that redefined how large civic buildings perform. Thermosash and Woods Glass delivered a total clad system that balances the functional – daylight, thermal, airtightness, acoustic control, and enclosure durability – with the beauty of integrated artistic glazing. The result is an envelope that sets a new standard for convention centres and façades alike. While the architecture takes centre stage, our facade performs quietly behind the scenes.

We believe a Thermosash façade solution makes your building better, speeds up your enclosure programme, saves you time and reduces your risk.

Locally engineering, testing, manufacturing and installing high performing façade systems since 1973.
