

” For an extremely exposed site, curved on plan, with relatively high building movements – an integrated total clad curtainwall solution with single source warranty to manage weathering risk was the only sensible solution for our clients.”

Brian Aitken | Peddle Thorpe Architects

Shangri-La Apartments - Auckland

Since 1973, we have been engineering high performance specific design building envelope solutions. For the last 23 years, we have been independently performance testing and certifying these systems for seismic, wind, water and air infiltration in our two storey high façade testing laboratory at Window Engineering Consultants, Auckland, an independently IANZ certified facility.

From curtainwalls, windows, shopfronts, rooflights to structural glass entrances and balustrades, Thermosash integrates these separate elements to minimise trade junctions, thereby improving productivity, buildability and speed of construction.

For proven design build guaranteed solutions, call Thermosash Commercial Limited.
