WINDOWS TO THE WIDER WORLD

A clear brief was given from the people of Wellington: a safe, resilient and future-ready central library - restored, re-imagined and responsibly delivered for generations to come.

Supporting Wellington's net-zero ambitions, the Thermosash PW1000 system was a natural choice for the aptly named Te Matapihi ki te Ao Nui (The Window to the Wider World). Designed, engineered, tested and manufactured in New Zealand, the system delivers high-performance outcomes while being gentle on the planet. Featuring our near-zero air leakage suite, engineered glass, and Thermosash Decarbal™ low-embodied carbon aluminium, the system is tailored to Wellington's demanding seismic and weather conditions as well as the project's 5 Star Green Star rating. We read the room and delivered!

We believe a Thermosash façade solution makes your building better, speeds up your enclosure programme, saves you time and reduces your risk.

Locally engineering, testing, manufacturing and installing high performing façade systems since 1973.
