## Cut energy costs, equipment costs and carbon emissions ... and make your building look and feel cool.

Improve your sustainability and keep the heat on the outside where it belongs with a passive or automated façade system. Our commercial window, curtain wall and unitised façade solutions offer seamless integration of separate elements such as our Shadegrade™ or Treadgrade™ system, external automated venetian blinds, fixed or actuated louvers or fins and green facades systems, all integrated within an engineered performance façade.

For a specific façade solution that can offer lower HVAC capital and running costs, improved productivity, a façade with no penetrations, no secondary structure, no leaks, reduced on-site trades, superior on-site buildability and increased speed of construction...

**Call Thermosash for your next engineered integrated green façade solutions.**
