# HELPING TO MAKE BUILDINGS BETTER

It is always a privilege to be involved in delivering public infrastructure and a responsibility we don't take lightly. Thermosash façade systems not only improve end-user experience and satisfaction, but our locally made, durable, low maintenance solutions with high seismic performance ensure a legacy that will stand the test of time. However, this project goes even further. Thermosash proudly donated upcycled unitised façade panels from a deconstructed building reducing the building's carbon footprint. We couldn't think of a more fitting project for these repurposed panels - looking after your most valuable assets - just like the children in this building.

For nearly 50 years, Thermosash has specifically engineered your concepts into buildings of excellence. When you are ready to design your building, specify the Thermosash range of Unitised™ curtainwall, commercial windows, shop fronts, rainscreen, sliding doors, and bespoke integrated external elements. We believe it makes buildings better, saves you time, and reduces your risk.

**Locally, Innovating, testing, manufacturing and installing façade systems since 1973.**
